

A New Vision for Summer Learning in California

**Media Alert – July 25, 2011**

## **East Bay Students to Celebrate Graduation from Summer Learning Programs**

### **Media Event**

**Oakland, CA** – Hundreds of low-income East Bay elementary school students enrolled in summer learning programs will celebrate their graduation on Friday, July 29 at Oakland’s Diamond Park with a “Field Day” of summer learning activities that would make Michelle Obama proud.

**What:** More than 300 low-income East Bay students will enjoy a variety of fun, hands-on team-building activities that reinforce their summer learning curriculum – physical education, community-building, environmental education and nutrition – and celebrate their successful completion of this premier summer learning program.

**When:** Friday, July 29, 9:30am – 11:30am

**Where:** Dimond Park, 3860 Hanly Rd, Oakland, CA 94602

#### **Interview opportunities include:**

- Low-income East Bay students enrolled in summer learning programs
- Bay Area and national experts on summertime learning

Summer learning programs are vitally important in preventing student “summer learning loss” and engaging low-income students in meaningful educational enrichment activities during the summer months.

Summer learning programs contribute substantially to children’s education, with a vast body of research showing that children’s participation in summer learning programs is a major factor in their academic success.

A lack of summer learning and enrichment opportunities leads to “summer learning loss” – a loss in students’ academic skills and knowledge during the summer months.

Summer learning loss, which is cumulative over time, contributes directly to a widening of the achievement gap between low-income and middle-income students. A lack of summer learning opportunities also contributes to increased student drop-out rates.

Children from low-income households who lack access to summer learning programs also disproportionately gain weight in summer because they lack access to the recreational programs and meal programs available during the school year and spend more time watching TV and being sedentary, thus increasing their risk of childhood obesity.

**In California, the vast majority of low-income youth lack access to summer learning opportunities, putting them at increased risk for obesity and academic jeopardy:**

- Only 27% of California children participate in summer learning programs.
- 48% of parents making less than \$35,000 did not enroll their child in any summer program.
- The majority of low-income youth don't attend a summer school or program, and a substantial number are taking care of themselves without adult supervision in the summer while their parents are away at work.
- Latino parents (32%) and African-American parents (31%) are more likely to say that there are no high-quality summer programs available in their neighborhood, compared with 15% of Asian parents and 20% of white parents.
